

COMPARISON WITH OTHER TOXIN REMOVAL METHODS

POWDERED ZEOLITE: These products are not bio-available to the human system. What has made this class of minerals valuable in extracting toxins from soil and waste streams is the fact that it does not mix with water. It is used to separate toxins from water, air, and soil. Even very fine nano particles are not available and only work in the digestive system. Powdered Zeolite does support remove toxins from the digestive tract, which is important. They do not provide full body toxin removal.

LIQUID ZEOLITE SUSPENSIONS: Liquid Zeolite products tend to be suspensions of clinoptilolite in water. These are nano or fine particles of clinoptilolite in water. They act like powdered zeolite and do not work throughout the body. Only “Soluble Zeolite Solutions” (Clinoptilolite Fragments) are fully bio-available to the body. Liquid Zeolite Suspension products have very limited systemic activity. There are too many liquid products to discuss anyone in detail, but none get beyond the blood brain barrier and none work through cellular walls. They have limited activity in the body as a whole where toxins are stored.

CITRUS PECTIN (MCP & PECTA-SOL-C): This product has proven effective in removing lead from the system. It is taken is 10 gram daily dosage. The performance on other heavy metal toxins is not as well established. The major issue is Citrus Pectin tends to knock toxins lose in to the blood, but does not bind them as well as hydrolyzed clinoptilolite. Citrus Pectins do not work through the blood brain barrier and does not work inside cell walls, as does hydrolyzed clinoptilolite. They do support improvements in cellular health and improve the immune system.

BROKEN CELL WALL CHLORELLA: This is a very important nutrient rich in chlorophyll. The broken wall types can be digested and are bio-available to the body. This helps the body and builds the immune system, but does not help significantly with toxin removal. This is a cellular health product and not a well established toxin remover.

MEDICAL CHELATION SYSTEMS: EDTA, DMSA, DMPS, and BAL are used medically for acute heavy metal toxicity. Each works best on a specific range of toxins. They are effective and have a well know range of side effects. For persons with heavy metal poisoning these are the standard of care.

COMPETITORS HYDROLYZED CLINOPTILOLITE: A process developed specifically for natural toxin removal that works systemically to remove toxins and improve cellular health. It is proven to pass through cell membranes and the blood-brain barrier and until recently there was only Hydrolyzed “soluble” Zeolite solution available that provided systemic delivery. Due to the concentrated strength of this product, it is only available through medical professionals, however, many users have reported strong detoxification symptoms and are only able to continue its use under the close observation of their doctors.

VITALITY Detox Drops – A proprietary Hydrolyzed “Soluble” Zeolite solution: Vitality Detox Drops is 100% bioavailable and proven to pass through cell membranes and the blood-brain barrier. These soluble zeolite fragments are a patent-pending technology for safe, systemic delivery that helps to remove toxins, improve cellular health and support the body’s natural processes. Our proprietary patent-pending technology for safe, bioavailable, systemic delivery is the most advanced formula available today! Test results, including heavy metal challenge tests and live blood cell analysis, show greater efficacy and users report experiencing “zero to none” detoxification symptoms as compared to our competitors “Hydrolyzed” formula.
